

The programme

The Senior Road Executives Programme consists of four linked, three day, intensive residential courses delivered by experts of international repute. The courses address the main building-blocks which are vital for roads to be sustainable, namely:

- Establishing responsibility through regulatory and institutional reform
- Providing adequate, stable and continuous financing
- Introducing appropriate enforcement, educational and traffic engineering measures to improve road safety
- Applying fundamental asset management principles and appropriate technology for road maintenance

Why you should attend

The courses have been specially designed to disseminate recent cutting edge advances in sustainable roads.

The format of interactive plenary sessions, case studies, question and answer times and site visits will enable you to: learn new concepts; discuss pertinent issues; interact and network with experts and fellow delegates; identify solutions to problems faced in your country, and; share experiences.
