Urban Transport and Climate Change Action Plans For Transportation Researchers, Transport Policy Makers and Decisioners

GTZ – Sustainable Urban Transport Project (SUTP)

Based on more than 25 years of practical experiences, GTZ hosts the “Sustainable Transport: A Sourcebook for Policy-Makers in Developing Cities” (www.sutp.org) with a wealth of information and knowledge on appropriate solutions, inter alia on tackling climate change in the transport sector. Through training and advisory services, decision makers in the transport sector are better informed about transport emissions and their impact on our climate. This may, for example, lead to improved urban transport systems, less traffic and better alternatives to using cars or motorized two-wheelers, which are responsible for the lion share of transport fuel emissions. A win-win-situation on the local and global levels, as transport operators and users may save on fuel and in turn reduce emissions. In a nutshell: Smarter mobility means more fresh air for people and less GHG pressure on our climate.

The flagship publication “Sustainable Transport: a Sourcebook for policy-makers in Developing Cities” compiles most international practices and provides access to numerous other resources. Materials are complemented by training courses targeted to policymakers, planners or engineers in cities, regional entities and on governmental level.
